Note	Nilsson et al. (2001) analyzed epitopes of 30 different LH mAbs. Antibody 5303 was classified as belonging to epitope group beta 1 recognizing intact LH and its beta subunit, but only weakly a common variant of LH. Antibody 5303 did not cross react with hCG, TSH or FSH. Antibody 5303 reacts also with rat LH as described in Bielmeier et al. (2004).
Isotype	lgG1
Clonality	Monoclonal
Epitope	Beta 1 as described in Nilsson et al. (2001). Two antibodies binding to the same, or closely located epitopes, belong to the same group and hence cannot be used as a pair in a sandwich assay. Epitope group numbering does not give any detailed information where the epitope is located.
