Analyte description Lipoprotein-associated phospholipase A2 (Lp-PLA2) also known as platelet-activating factor

acetylhydrolase (PAF-AH) is an enzyme involved in atherosclerosis related vascular inflammation. Increased Lp-PLA2 mass and activity are prognostic biomarkers for cardiovascular disease (CVD) including coronary heart disease and ishcemic stroke.

Product stability TEMPERATURE, TIME RESULT

-70 °C, 21 days OK
-20 °C, 21 days OK
+4 °C, 21 days OK
+35 °C, 21 days OK
+45 °C, 7 days OK

Stability testing is performed in the product buffer to see whether different temperatures affect the antigen binding, charge or composition of the antibody. Please note that the shelf life given on the first page is based on real time stability testing at $2-8\,^{\circ}\text{C}$ in the product buffer.

Miscellaneous Casein is recommended to be used in blocking buffer instead of BSA.
