Anti-h Albumin 6502 SP-2

Product overview

Catalog number 100064

Specificity Antibody recognizes human albumin

Description Monoclonal mouse antibody, cultured *in vitro* under conditions free from

animal-derived components.

Product buffer solution 0.9 % NaCl, 0.095 % NaN₃ as a preservative

Shelf life and storage 36 months from manufacturing at 2–8 °C

Subclass IgG_{2a}

Analyte description Albumin normally constitutes about 60 % of human plasma proteins and is

produced in the liver. It is important in regulating blood volume by

maintaining the oncotic pressure. It also serves as carrier for molecules of

low water solubility, including lipid soluble hormones, bile salts, unconjugated bilirubin, free fatty acids, and drugs. Low albumin

(hypoalbuminemia) may be caused by liver disease, nephrotic syndrome,

burns, protein-losing enteropathy, malabsorption, malnutrition, late pregnancy, genetic variations and malignancy. High albumin (hyperalbuminemia) is almost always caused by dehydration.

Parameters tested on each lot

Product appearance Liquid, may turn slightly opaque during storage

Product concentration 2.5 mg/ml (+/- 10 %)

Immunoreactivity 80–120 % compared to the reference sample in an FIA test

IEF Profile 6.9–9.2

Purity ≥ 95 %

Kinetic parameters

Association rate constant Not Determined (N/D)

Dissociation rate constant N/D

Affinity constant 5 x 10⁹ 1/M

Oy Medix Biochemica Ab

FI-02180 Espoo, Finland

Klovinpellontie 3,

Determination method Radioimmunoassay (RIA)

Determination antigen Human Albumin, Sigma (Cat A8763, Lot 46F9380)

Product specification ANTIBODY

2022-09-16

Cross-reactivities AFP < 0.7 % (Aalto Bioreagents, Cat AE 3005, Lot 018)

Epitope N/D

Pair recommendations

		DETECTION	
		6501	6502
CAPTURE	6501	-	-
	6502	+	-

Please note that pair recommendations are based on results obtained by our laboratory. Equally good results may be obtained using other pairs and therefore these recommendations are only indicative.

Platforms tested N/D

Antigens tested N/D

Product stability TEMPERATURE, TIME RESULT

+45 °C, 7 days Reduced immunoreactivity

Stability testing is performed in the product buffer to see whether different temperatures affect the antigen binding, charge or composition of the antibody. Please note that the shelf life given on the first page is based on real time stability testing at 2–8 °C in the product buffer.
