## Medix Biochemica

### Anti-h CRP 6407 SPTN-5

Product overview						
Catalog number	100147					
Specificity	Antibody recognizes human C-reactive protein (CRP), binding is Ca <sup>2+</sup> independent					
Description	Monoclonal mouse antibody, cultured <i>in vitro</i> under conditions free from animal-derived components.					
Product buffer solution	50 mM Na-citrate, pH 6.0, 0.9 % NaCl, 0.095 % NaN $_3$ as a preservative					
Shelf life and storage	24 months from manufacturing at 2–8 °C					
Subclass	lgG1					
Analyte description	CRP is a member of the class of acute-phase reactants, as its levels rise dramatically during inflammatory processes occurring in the body. CRP rises up to 50,000-fold in acute inflammation, such as infection. It rises above normal limits within 6 hours, and peaks at 48 hours. Its half-life is constant, and therefore its level is mainly determined by the rate of production (and hence the severity of the precipitating cause). CRP is used mainly as a marker of inflammation. Measuring and charting CRP values can prove useful in determining disease progress or the effectiveness of treatments.
