

# Validated tumor marker reagents for your IVD assay needs

## Discover how our expertise can help reduce your assay development time

At Medix Biochemica Group, as the pioneers in antibody and antigen development, we have the expertise to provide you with validated reagents for your cancer IVD assays. Our extensive portfolio provides a single source of antibodies, antigens, and validation biospecimens for your cancer marker immunoassay development projects, meaning you have rapid access to critical raw materials necessary for commercialization which will help save time and resources – ultimately, getting your essential diagnostic solutions to market more quickly.

Many of our raw materials are already validated and widely used in IVD test platforms. We also provide many emerging cancer-associated markers.

### Our most popular tumor marker products include:

Analyte	Antibody	Antigen
ACP		•
AFP	•	•
B2M	•	•
CA 125	•	•
CA 15-3	•	•
CA 19-9	•	•
CA 50		•
CA 72-4	•	•
CA 242	•	•
Calcitonin	•	
CEA	•	•
CYFRA 21-1	•	•
GDF-15	•	
HE4	•	•
Hemoglobin	•	•
Inhibin A	•	
NSE	•	•
Pepsinogen I	•	•
Pepsinogen II	•	•
PSA	•	•
PSA-ACT Complex		•
S100B	•	•
SCC	•	

## Patient samples suitable for cancer assay validations

We also offer a wide range of biological materials to provide patient samples suitable for cancer assay validations.

### Patient samples – Serum:

- Breast cancer 991-24-S-BC
- Prostate cancer 991-24-S-PC
- Colon cancer 991-24-S-COC
- Lung cancer 991-24-S-LC

### Patient samples – Plasma:

- Breast cancer 991-58-S-BC
- Prostate cancer 991-58-S-PC

### Normal Biospecimens – ideal for use in biological matrices or negative controls:

#### Serum

- 991-24-P (bulk)
- 991-24-PS (healthy control samples)\*

#### Plasma

- 991-58-S / 991-58-P-RC (Bulk Source / Recovered)
- 991-58-PS (healthy control samples)\*

\* Healthy controls can typically be age and gender matched. Ask us more!
